

AEROGEL COMPOSITE WITH FIBROUS BATTING

INVENTORS:

Christopher J. Stepanian, George L. Gould, and Redouane Begag

Abstract of the Disclosure

Aerogel composite materials having a lofty fibrous batting reinforcement preferably in combination with one or both of individual short randomly oriented microfibers and conductive layers exhibit improved performance in one or all of flexibility, drape, durability, resistance to sintering, x-y thermal conductivity, x-y electrical conductivity, RFI-EMI attenuation, and/or burn-through resistance.
